Right click on the file and choose either Impose, Compose or JobMaster from the context menu.

When the document is opened it should look similar to the image below:

Fiery JobMaster-Impose - A4 - Brochure - World of Wonders 24pp.pdf

Marks: None

Scale: Do not scale

Scale Factor: 100 %

If the job is not already imposed, lay it out as required.

If imposition is not required then leave the layout as is. Refer to Page 5.

From the menu on the top left hand side select File and Save As...

Choose a location on the local computer to save the job file which in the case above is Imposed.

This will change the file type to a Flattened PDF and export it from the Fiery controller to the specified location.

If an imposition was applied previously, the pages will be laid out in the flattened PDF as required by the imposition settings.

Additionally, if no imposition is required there is an option to take the job file and open it in Adobe Acrobat if this is installed on the computer you are working from.

Right click or highlight a page in the Compose area of the screen.

From the File menu choose Edit in Acrobat.

The job file will then be opened in Adobe Acrobat and can be re-saved as a PDF.

On Fiery controllers with Graphic Arts there is also a function which allows files to be viewed post-rip and exported as a ripped PDF, this is the ImageViewer function and the file size of the generated PDF can be considerable.

To export a Soft Proof PDF highlight a file on the controller which has been Processed and Held.

Right click on the job and select Imageviewer from the menu.

Imageviewer will open and look similar to the image below:

From the File menu select Export then Soft Proof PDF as the file type.

The export options are then shown, select the page range and resolution of the exported PDF then click on OK to begin exporting.

The Soft Proof is then created, the size of this can be considerable depending on the number of pages selected previously and the chosen resolution of the file.

The windows dialogue to save the file in a suitable location will then allow the file to be saved where required.
